Volumes 2 and 3 of the Industrial Revolution eleven part set (Industrial Revolution in Britain vol I and II) present over thirty of the articles which have best illuminated Britain's Industrial revolution, and cover four main areas: the concept of the Industrial Revolution, and the central themes of land, labour and capital. They provide a way of exploring historians' changing approaches to the first Industrial Revolution. A substantial introduction sets the articles into their conceptual, evidential and historiographical context and directs readers to recent work.
